

CASE STUDY # 221

Company / User: Datamax, St. Louis MO.

Before: Datamax, St. Louis is a Managed IT and Security Service company. Using existing tools they managed to secure most of their network assets but were unable to ensure Security on the printers and print.

After: APWI provided the RXforPrint Security software. RXforPrint Security gave them the data they needed to secure the most insecure part of their network environment, Print. By generating accurate security log of all print jobs they were able to provide management with the security, information and analytics necessary to ensure that restricted, sensitive and classified information was not being printed unnecessarily.

How the RXforPrint Security solution works: RXforPrint Security silently watches the print environment and collects data on all jobs as they are being sent to the printer. This data can then be processed providing information on suspect activity so that it can be stopped before it becomes a major issue.

Impact: RXforPrint Security provided an accurate security audit trail of all internal print documents. This aided Datamax in maintaining a high level of security and compliance that would not have been possible otherwise.
