IPDSXpress™

IPDSXpress™ *uses the most popular IPDS conversion code to convert your IPDS data stream into all Microsoft recognizable print drivers, allowing you to print to all printers that use standard Windows print drivers.*

IPDSXpress™ is a cost-effective, software based IPDS print server that can be installed on a MS Windows 2000/XP or better system in a matter of minutes. The purpose of the product is to provide organizations that have invested in IBM's IPDS application technology access to a much broader group of printing choices than just the small number of hardware solutions in the form of converter boxes and embedded cards.

Quality

- ▶ Easy installation on all Windows Systems.
- ▶ Guaranteed 100% accurate output.
- ▶ Enjoys the reliability of a backed up/ hot swappable server systems.
- ▶ Very economical, and can be moved from printer to printer.

Flexibility

- ▶ Outputs to all Windows Drivers, allowing a wide choice in printers.
- ▶ Supports all IBM InfoPrint page printer commands.
- ▶ Installs as a standard Windows Service and runs in the background.
- ▶ Choice of Black & White, or Color versions.

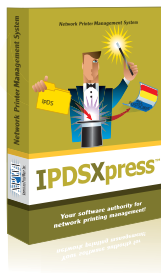

Capability

- ▶ Offers **highlight color** as standard in B/W product.
- ▶ The IPDSXpress software kernel has the largest installed base globally.
- ▶ Fully featured **full color** version available.
- ▶ Handles large files.
- ▶ Faster throughput than converter boxes or embedded cards.

Easy Installation

It is easy and free to try IPDSXpress™. Simply go to www.apwi.com to view the product description and choose to download the software to your PC. You will be able to use the product on 1 printer. All pages will print with a demo stamp until the license code is activated.

IPDSXpress™

Technical Information

IPDSXpress™ is a powerful software product that can convert IPDS into a format supported by Windows print drivers and redirects the data stream to the selected print driver.

Key Technical Features:

- ▶ IPDSXpress™ supports all IPDS functions of an IBM InfoPrint page printer including, Outline fonts, 2D barcodes (PDF417, maxicode, etc..) and Full Color printing (complete FS45). To our knowledge there is no other IPDS provider that can offers the complete FS45 color support.
- ▶ IPDSXpress™ can emulate up to 64 simultaneous and independent IPDS printers on the same PC. We have limited it to 64 as the processing power of the server may become an issue.
- ▶ IPDSXpress™ allows auto import and configuration of your installed Windows printer drivers. This includes Adobe PDF Driver, IBM AFP Driver, Microsoft Office Document Image Writer and many other types of Windows printer drivers. IPDSXpress™ automatically detects the different Windows drivers and integrates seamlessly with them. You also have the option to "point and click" the drivers you want.

System Requirements:

IPDSXpress™ runs on Windows XP, Windows 2000 Workstation and server, Windows 2003 server, and Windows NT 4.0 (SP6). Processor minimum: 1 GHz – for example Pentium III.

Because the program installs as a Windows Service, administrator rights are required to run the install program. Administrator rights are also required to manage the Windows Service (start, restart, and stop).

This program should be installed on a Workstation that can function as a server in your network environment. Usually this means that the Workstation should have a fixed IP address. Alternative: Your network administrator may allow or even require registration of the Workstation by hostname.

The hard disk on the Workstation should have at least 10MB free before this program is installed. Included in this requirement is 3-4MB for resident fonts and code pages. The program can manage storage of up to 55MB fonts downloaded from the host.

The Workstation should have minimum 256MB RAM. Each active host session requires about 3MB of RAM for handling host resources.

The web-browser used for IPDSXpress Administration (configuration, monitoring) must have JavaScript enabled and must be able to handle framesets. The install program allows you to select the browser to use from those installed on the Workstation.

Documentation for Users:

When you download the trial software it will include a Getting Started and Quick Guide file (PDF), the license text, system requirements, and the release notes (txt files) into the destination folder for the program files.

The Getting Started and Quick Guide document includes the basics of configuring and using the print server as well as tips on managing the Windows Service and tips on port management.
