```

The data is the replacement ASCII translation. In order to replace 1 character, the whole translation table has to be defined.

EBCDIC code page 37 and ASCII code page 437 are the defaults used by the host print transform (based upon printer type).

The green highlighted data in the table is the *modified* ASCII '21'X (original value was '20'X) that corresponds to the EBCDIC '41'X. This data was pulled from the Q037BF437 Translation Table in QUSRSYS. Translation tables can be viewed using the WRKTBL command.
