

FTP: file transfer from the DOS prompt

This is best done from the PC on which you will receive the data.

- 1) Open a 'Command Prompt'.
- 2) Type 'ftp' at the command prompt.
- 3) Type 'open 64.58.163.45'.
- 4) Type in userid at the prompt.
- 5) Type in password at the prompt.
- 6) To download type in 'get <filename> C:\wherever it needs to go'
- 7) To upload type in 'send <filename> C:\wherever it needs to go'
- 8) You should see nothing at this point. Once the file is done transferring a couple of lines will appear showing how much data was transferred and how long it took.
- 9) at the ftp prompt type 'bye' to log off
- 10) You're done.
